

## Text field widths

Text field

Desktop max width = 600px (6 columns)

### Text fields

Text fields should match the intended input length to give affordance to the required entry. The width can only be controlled by limiting characters for example, "When was the property built" is 4 characters width box. These limited widths are present in all breakpoints\*NB: We can only limit up to 11 characters but are expecting to extend that number

## Radio buttons

Radio buttons (standard)
